SUMMARY

- Long-time leader in the Taiwanese Python community—translation lead for Python’s official documentation, former PyCon Taiwan dev lead, and contributor across the Python ecosystem
- Senior Python backend engineer with 8+ years in production—net-new services, multi-tenant SaaS, and infrastructure modernization across logistics, fintech, and computer vision
- Architect-mode work spanning system design, platform standards, and operational ownership—current focus on platform engineering and reliability

OPEN SOURCE & COMMUNITY EXPERIENCE

Python Documentation Community

Translation Lead & Maintainer

July 2021 - Present

- Led volunteers to grow the Traditional Chinese translation of Python’s official documentation from 2% coverage to ~30%; improved contributor efficiency by automating translation workflows and standardizing terminology.
- Hosted Python documentation translation meetups (200+ participants in total) and organized translation workshops at PyCon TW, COSCUP, and sciwork conference.
- Contributed documentation improvements to CPython and FastAPI, plus tooling fixes on sphinx-lint.
- Spoke at COSCUP 2025 on Python documentation and its community.

PyCon Taiwan

Event Staff

Oct 2024 - Present

- Co-organized CPython contributor workshop guiding participants through build setup and first PR.
- Featured on PyCast (PyCon TW’s podcast channel) discussing junior-to-senior engineering growth, and interviewed Sebastián Ramírez (creator of FastAPI) for an upcoming episode.

Dev Member/Lead

Mar 2020 - Oct 2024

- Led a team of 10+ volunteer developers to maintain the 2021-2023 official website and the proposal submission/reviewing platform in Django.
- Rebuilt the frontend from scratch in Nuxt.js, replacing legacy Django templates for lower maintenance cost and better SEO/i18n support.
- Operated the GCP infrastructure for dev teams (web, data, automation) and managed cost structure.
- Coached successors on cross-functional collaboration, stakeholder communication, and project management.

Django Community

Contributor

2023 - Present

- Contributed to Django ecosystem projects such as model_bakery, data-spec-validator, dj-registry, and django-localflavor.

TECHNICAL SKILLS

Languages: Python, JavaScript / TypeScript

Web: Django, FastAPI, Flask, Vue.js / Nuxt.js

Cloud & Container: AWS (EKS, ECS, S3, Lambda, SQS, API Gateway), GCP, Docker, Kubernetes, Helm, ArgoCD, Terraform

Data & Messaging: PostgreSQL, MySQL, MongoDB, Redis, Celery, Elasticsearch

Observability: Grafana, Elastic APM, Sentry

Data Engineering: Snowflake, dbt, Metabase, BigQuery

Python Tooling: Poetry, uv, ruff, pytest

WORK EXPERIENCE

GoFreight

Apr 2022 - Present

A leading multi-tenant vertical SaaS platform powering the freight forwarding industry.

Senior Backend Engineer & Tech Lead

Architecture & Engineering Standards

- Owned the design and rollout of the company's first net-new microservice—an API gateway that gave GoFreight its first integration channel with external customer and vendor systems, and set the company's monolith → microservices direction.
- Built the service codebase template, GitOps CI/CD pipeline (GitHub Actions → ArgoCD → EKS), and production-readiness playbook (SLOs, alerts, on-call, incident runbooks); cut new-service launch from 10 days to 3 days. Now the standard for every microservice.
- Established the adapter pattern for enterprise integrations—now powering accounting, payment, and international customs system connections.
- Mentored 4 interns and junior engineers through pairing sessions, code review, and structured feedback.

Business & Revenue Growth

- Led end-to-end design and integration of a new payment platform with a fintech vendor, while stabilizing and sunsetting the legacy payment service. 10× uplift in transaction volume and revenue.
- Scoped, decomposed, and prioritized major epics; coordinated cross-functional teams (engineers, PMs, and international vendor and customer partners across US, Japan, EU, and China) to hit every major GTM milestone.

Operations & Platform Engineering

- Built the on-demand sandbox platform on EKS—AI-agent-driven self-served provisioning of preview environments per ticket for QA verification or customer UAT.
- Owned production observability and alerting—Grafana dashboards across CloudWatch, Elasticsearch, and Snowflake; cut manual monitoring by 5 hours per week.
- Drove production infra modernization—EKS cluster upgrade, Elastic Cloud upgrade, and MySQL → PostgreSQL migration.
- Improved the internal SME knowledge bot for sales/pre-sales product Q&A through knowledge base curation and AI agent skill tuning.
- Designed and built the fintech product data pipeline (Snowflake + dbt + Metabase)—translated PM requirements and customer usage patterns into per-customer insights that informed product decisions.

Umbo Computer Vision

Oct 2018 - Sep 2021

A cloud-based AI startup transforming the surveillance industry through human and vehicle intrusion detection.

Backend Engineer – Cloud AI Team

- Developed event-filtering logic based on motion value, deep-learning-model output mask analysis, and human-examining feedback. Raised system automate rate from 40% to 90% while sustaining 10× channel growth.
- Reconstructed the event-based detection service from AWS Lambda to an HTTP server on FastAPI + AWS ECS; improved throughput by 20% with Gunicorn + async I/O, verified via Locust load testing.
- Reduced average request latency by 30% through MongoDB optimization—refining indexes for usage patterns, rewriting queries for index-covered plans, and adopting read-write separation.
- Built ETL cronjobs on AWS EKS (Helm) importing event metadata to Elasticsearch, powering customer usage analysis and system health monitoring.

SELECTED CERTIFICATES

Certified Kubernetes Administrator (CKA)

Apr 2026

MongoDB Certified Associate Data Modeler

Mar 2024

AWS Certified Solutions Architect – Associate

Aug 2023

See additional certifications and course works on my [LinkedIn](#).

EDUCATION

National Taiwan University

B.S. & M.S., Mechanical Engineering

Aug 2012 – Aug 2018
